

Without seeing your exact code here's is the workaround with "generic" code.

Original code:

```
%let token = xxxxx;
%let url = "https://redcap.ucdenver.edu/api/";

data _null_ ;
file in ;
put "%NRStr(content=record&type=flat&format=csv&token=) &token";
run;

proc http
  in=in
  out=out
  url=&url
  method="post";
run;
```

Work around:

Add a dummy parameter after the token and it should work. (see example below) :

```
put
"%NRStr(content=record&type=flat&format=csv&fields=last_first_mi&token=)&token%NRStr(&_x=1)";
```
